

AWS ELASTIC BEANSTALK

STEPS TO CREATE Elastic beanstalk application or environment

A screenshot of the Amazon Elastic Beanstalk landing page. The page has a dark blue header with a back arrow on the left. The main content area is dark blue with white text. The title 'Amazon Elastic Beanstalk' is in a large, bold font, followed by 'End-to-end web application management.' Below this is a paragraph describing the service. On the right, there is a white box with the heading 'Get started', a subheading 'Easily deploy your web application in minutes.', and a yellow 'Create application' button.

Compute

Amazon Elastic Beanstalk

End-to-end web application management.

Amazon Elastic Beanstalk is an easy-to-use service for deploying and scaling web applications and services developed with Java, .NET, PHP, Node.js, Python, Ruby, Go, and Docker on familiar servers such as Apache, Nginx, Passenger, and IIS.

Get started

Easily deploy your web application in minutes.

Create application

Step 1: Create an Application

- Open the **AWS Management Console**.
- Go to **Elastic Beanstalk**.
- Click **Create application**.
- Enter an **Application name**. : (my-first-eb-app)
- Select the **Platform**. (python)
- Choose **Sample application**.

A screenshot of the 'Configure environment' step in the AWS Elastic Beanstalk console. The left sidebar shows a progress bar with six steps: 'Step 1: Configure environment' (selected), 'Step 2: Configure service access', 'Step 3 - optional: Set up networking, database, and tags', 'Step 4 - optional: Configure instance traffic and scaling', 'Step 5 - optional: Configure updates, monitoring, and logging', and 'Step 6: Review'. The main content area is titled 'Configure environment' and contains two sections: 'Environment tier' and 'Application information'. The 'Environment tier' section has two radio buttons: 'Web server environment' (selected) and 'Worker environment'. The 'Application information' section has a text input field for 'Application name' with the value 'my-first-eb-app' and a note 'Maximum length of 100 characters.' Below this is a section for 'Application tags (optional)'.

Step 1

Configure environment Info

Step 2

Configure service access

Step 3 - optional

Set up networking, database, and tags

Step 4 - optional

Configure instance traffic and scaling

Step 5 - optional

Configure updates, monitoring, and logging

Step 6

Review

Environment tier

 Info

Amazon Elastic Beanstalk has two types of environment tiers to support different types of web applications.

☒ Web server environment
Run a website, web application, or web API that serves HTTP requests. [Learn more](#)

☐ Worker environment
Run a worker application that processes long-running workloads on demand or performs tasks on a schedule. [Learn more](#)

Application information

 Info

Application name

my-first-eb-app

Maximum length of 100 characters.

► Application tags (optional)

Environment information [Info](#)

Choose the name, subdomain and description for your environment. These cannot be changed later.

Environment name

My-first-eb-app-env

Must be from 4 to 40 characters in length. The name can contain only letters, numbers, and hyphens. It can't start or end with a hyphen. This name must be unique within a region in your account.

Domain

Leave blank for autogenerated value

.us-east-1.elasticbeanstalk.com

[Check availability](#)

► Environment description

Platform [Info](#)

Platform

Python

Platform branch

Python 3.14 running on 64bit Amazon Linux 2023

Step 2: Configure the Environment

- Select **Single instance (Free Tier)**.
- Create and select the **Service Role**.
- Create and select the **EC2 Instance Profile**.
- Keep the remaining settings as default.
- Click **Create application**.

Step 1

Configure environment

Step 2

Configure service access

Step 3 - optional

Set up networking, database, and tags

Step 4 - optional

Configure instance traffic and scaling

Step 5 - optional

Configure updates, monitoring, and logging

Step 6

Review

Configure service access [Info](#)

Service access

IAM roles, assumed by Elastic Beanstalk as a service role, and EC2 instance profiles allow Elastic Beanstalk to create and manage your environment. Both the IAM role and instance profile must be attached to IAM managed policies that contain the required permissions. [Learn more](#)

Service role

Choose an IAM role for Elastic Beanstalk to assume as a service role. The IAM role must have the required IAM managed policies.

aws-elasticbeanstalk-service-role

[Create role](#)

EC2 instance profile

Choose an IAM instance profile with managed policies that allow your EC2 instances to perform required operations.

aws-elasticbeanstalk-ec2-role

[Create role](#)

EC2 key pair - optional

Select an EC2 key pair to securely log in to your EC2 instances. [Learn more](#)

my-key

[Create key pair](#)

Cancel

[Skip to Review](#)

[Previous](#)

[Next](#)

Step 3: Verify and Clean Up

- Wait until the environment status becomes **Healthy**.
- Open the **Environment URL** to verify the sample application.

Benefits of AWS Elastic Beanstalk

Discover why thousands of developers rely on AWS Elastic Beanstalk to deploy and manage their applications.
